Direct Optical Component

High reflectance optical engine delivers main beam focus through a revolutionary HT diffusing panel with 93% transmission and 89% haze, the result is extraordinary control and efficiency. The radial curve reduces interior reflections and improves transmission. The radial HT geometry is particularly suited for single lamp conversions.

Diffuser Surround

(2) Slopping high transmission acrylic diffuser panels manage contrast and generate soft, even, higher angle luminance.

Reflector

Multi-radii high reflectance white reflector distributes light through both optical elements.

Luminaire Type
