

Re-lighting a Parking Garage?

FSC Garage Lights

The 7500 and 6000 series are wall or ceiling mount fixtures ideal for parking garages. A low wattage F17T8 or 2ft LED lamp in each 4' section is constantly on to provide base light levels at all times. Primary lamps are controlled by an occupancy sensor or photocell and shut off during times of inactivity. Fixtures are designed to operate at low temperature (2' lamp keeps interior area warm) and both series can be upgraded to advanced lighting controls that can be integrated into a building management system.

7500– Radial SERIES

The 7500 series gasketed enclosure is totally dust and moisture resistant. The enclosure is constructed of a fiberglass upper body and a high efficiency radial lens, the diffuser is securely positioned in a permanent poured in place sealing gasket. Fixture can be ordered Wet Listed (IP65 and IP67) if needed a specular reflector can be added to shape light distribution where required.

6000 SERIES

The 6000 series is modern radial wraparound that provides up-graded aesthetics in a cost effective fixture. The housing is made from cold rolled steel and finished in a white polyester polymer with an acrylic lens. A specular reflector can be added to shape light distribution where required.

Advanced Lighting Control Options:

FSC can integrate advanced lighting control technology into the lighting fixtures themselves which provides clients with the most energy efficient fixtures available in the marketplace today. Each fixture is individually addressable and can be integrated into the Building Management System. A facility manager can then commission them in the most efficient manner while maintaining safe light levels. Call Factory for more information.
